

AMENDMENTS TO THE SPECIFICATION

Please amend paragraph [082] on page 22 of the specification as follows:

--[082] In an alternate method of occluding a fallopian tube according to the invention, a laparoscope with a working channel is inserted into one trocar port. The laparoscope with a working channel is sized and configured to accept the tube assembly 230 of the clip applicator 200. The visualization cannula preferably has an overall diameter of 10 mm or less. The single visualization cannula may be inserted through one trocar port that is inserted into the patient's umbilicus. The method is similar to that described above except that only one trocar port need be inserted into the patient's abdominal cavity. Once the ~~laparoscope~~laparoscope is installed into the trocar port and the cavity insufflated, the tube assembly 230 of the clip applicator 200 may be inserted. The method may then proceed in the manners described above.—
